RE: Docket # 98N-1038 (Food Irradiation)

It is with grave concern for the well being of the human race, the environment and our right to know what we eat that I register very strong objection to food irradiation of any kind, and most specifically, the attempt by the nuclear industry at more subterfuge - NO LABELING or weakened labeling of foods subjected in any way to radiation!

The majority of Americans don't want radiated food! And the remaining minority, with education of the facts as we know them of the inherent horrors of radiation, would join the rest of us.

READ THE BOOKS, PLEASE written by scholars of nutrition! This is BAD for us!! C4005

98N-1038 Lastly, food irradiated should and must be labeled with RADUR AND "TREATED WITH RADIATION". It is only because the nuke industry has so much to hide they are determined to hide this information from us.

Thank you and doest this of the message. May 1999
